

Employee 2

AI / Backend Engineer

Hyderabad, India • employee2@example.com • +91 90000 00002 • github.com/employee2

PROFESSIONAL SUMMARY

Backend and AI Engineer with 3+ years of experience developing Python services and integrating machine learning and natural language processing into production applications. Strong in FastAPI, Python, PostgreSQL, NLP, LLM APIs, vector search, and asynchronous backend systems. Experienced in turning AI prototypes into reliable APIs and collaborating with product and frontend teams.

TECHNICAL SKILLS

Languages	Python, SQL, JavaScript
Backend	FastAPI, Flask, Django, REST APIs, Pydantic
AI / NLP	NLP, LLM APIs, LangChain, embeddings, vector search, text classification, prompt engineering
Databases	PostgreSQL, MongoDB, Redis
Cloud & DevOps	AWS (EC2, S3), Docker, GitHub Actions, Linux
Tools	Git, Pytest, Postman, OpenAPI, Jupyter

PROFESSIONAL EXPERIENCE

AI Backend Engineer | NeuralWorks Technologies | 2024–Present

- Built FastAPI services that expose NLP and LLM-powered features to web applications.
- Developed document-processing pipelines for extracting text, generating embeddings, and retrieving relevant information from candidate documents.
- Implemented semantic search using embeddings and a vector database, with PostgreSQL used for application and metadata storage.
- Integrated third-party LLM APIs with structured prompts, validation, retry handling, and logging.
- Designed asynchronous processing workflows for large document batches using Python workers and Redis.
- Created automated tests for API endpoints and core text-processing components using Pytest.

Software Engineer | ByteBridge Solutions | 2023–2024

- Developed REST APIs using Flask and FastAPI for internal analytics and customer applications.
- Built a text-classification prototype for automatically categorizing customer support messages.
- Optimized PostgreSQL queries and implemented Redis caching for frequently requested API data.
- Worked with frontend developers to integrate backend APIs into React applications.

SELECTED PROJECTS

Intelligent Resume Screening System

Developed a prototype that extracts resume text, identifies skills and experience, generates candidate embeddings, and compares candidates against a job description. Used Python, FastAPI, NLP techniques, LLM APIs, PostgreSQL, and vector search.

Customer Support Intent Classifier

Created an NLP service that classifies incoming support messages into predefined intent categories and exposes predictions through a REST API. Evaluated multiple text-processing approaches and added confidence thresholds for uncertain predictions.

EDUCATION

B.Tech in Computer Science and Engineering | Jawaharlal Nehru Technological University | 2019–2023

CERTIFICATIONS
