

Employee 5

Senior Backend & Machine Learning Engineer

Pune, India • employee5@example.com • +91 90000 00005 • github.com/employee5

PROFESSIONAL SUMMARY

Backend and Machine Learning Engineer with 5+ years of experience designing production APIs, data-processing systems, and machine learning services. Strong expertise in Python, FastAPI, PostgreSQL, distributed processing, deep learning, NLP, and cloud infrastructure. Experienced in building end-to-end ML systems from data preparation and model training through API deployment and monitoring. No frontend specialization; focused on backend, ML, and infrastructure.

TECHNICAL SKILLS

Languages	Python, SQL, Bash, Java
Backend	FastAPI, Django, Flask, REST APIs, Celery, asynchronous services
Machine Learning	Scikit-learn, PyTorch, TensorFlow, model evaluation, feature engineering
Deep Learning	Neural networks, CNNs, RNNs, Transformers, transfer learning, fine-tuning
AI / NLP	NLP, text classification, embeddings, tokenization, semantic search, LLM integration
Data	Pandas, NumPy, PostgreSQL, Redis, Elasticsearch
Cloud / DevOps	AWS (EC2, S3, RDS, ECR), Docker, Kubernetes, GitHub Actions, Linux, Nginx
Tools	Git, MLflow, Pytest, Jupyter, OpenAPI

PROFESSIONAL EXPERIENCE

Senior Backend & ML Engineer | DataForge Technologies | 2022–Present

- Designed Python and FastAPI services for machine learning inference, document processing, and high-volume data workflows.
- Built production NLP pipelines for document classification, entity extraction, semantic search, and candidate-profile matching.
- Developed and fine-tuned PyTorch deep learning models, including Transformer-based text classifiers, and evaluated them using precision, recall, F1, and confusion matrices.
- Containerized ML and backend services with Docker and deployed workloads on AWS using EC2, ECR, S3, and RDS.
- Implemented asynchronous processing with Celery and Redis for large document and inference workloads.
- Established model experiment tracking and reproducibility practices using MLflow, Git, and automated test pipelines.
- Optimized PostgreSQL queries and backend services to support high-volume API traffic.

Backend Engineer | CloudMetric Labs | 2021–2022

- Developed Django and FastAPI REST services for analytics and data-processing applications.
- Designed PostgreSQL schemas and APIs for customer, transaction, and reporting workflows.
- Built Docker-based development environments and contributed to CI/CD pipelines using GitHub Actions.
- Created Python data-processing scripts using Pandas and NumPy for internal analytics workflows.

SELECTED PROJECTS

Deep Learning Resume Intelligence Platform

Built an end-to-end resume analysis platform that extracts text from PDF documents, generates structured candidate information, and ranks profiles against job requirements. Used Python, PyTorch, Transformer models, embeddings, FastAPI, PostgreSQL, Redis, Docker, and AWS. Designed batch-processing and inference APIs for large candidate datasets.

Transformer-Based Document Classification System

Developed and fine-tuned a Transformer model to classify business documents into multiple categories. Built the preprocessing pipeline, training and evaluation workflow, model-serving API, and confidence-based prediction logic. Achieved strong validation performance and packaged inference as a containerized FastAPI service.

Scalable ML Inference Service

Designed a backend service for serving machine learning models through REST APIs. Added asynchronous job processing, Redis caching, request validation, structured logging, health checks, and Docker-based deployment.

EDUCATION

M.Tech in Artificial Intelligence | Indian Institute of Information Technology | 2019–2021

B.Tech in Computer Science and Engineering | Savitribai Phule Pune University | 2015–2019

CERTIFICATIONS

AWS Certified Developer – Associate • Deep Learning Specialization • Machine Learning Engineering with Python
